Health data: where to find it? How to access it?

Shona Cosgrove (Sciensano), Celia Alvarez (SAS), Teresa D'Altri (CRG)

HealthyCloud project has received funding from the European Union's Horizon 2020 research and innovation programme under the grant agreement N° 965345.

Health data: where to find it?

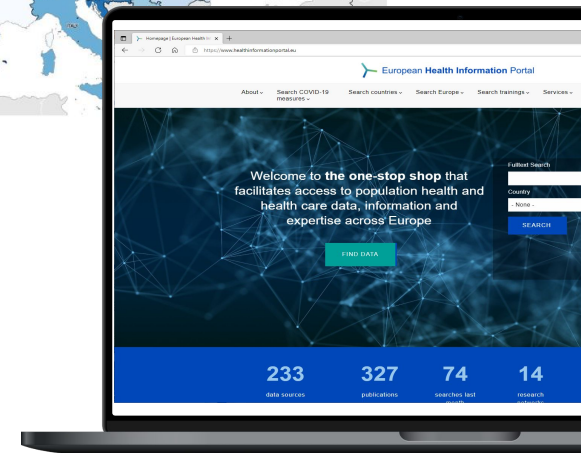

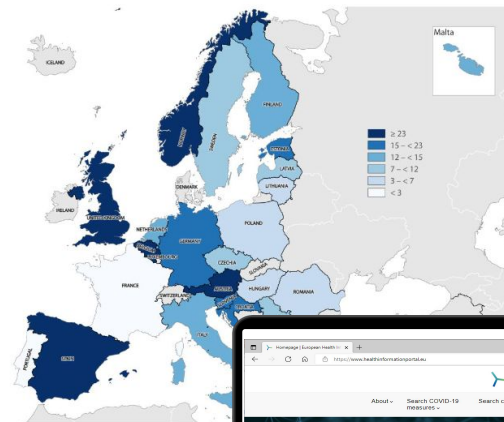

HEALTHYCLOUD
Health Research & Innovation Cloud

- **Landscape analysis of health-related data: FAIRness levels and feasibility of linking individual level data**

- Survey and HealthyCloud FAIRness assessment tool
- Collaboration with PHIRI Health Information Portal (>330 records)
- Findings:
 - Heterogeneity of health data collections
 - Findings supportive of individual data linkage: individual level data, pseudonymisation, unique personal identifier
 - Findings not supportive of linkage: lack of interoperability
 - Variable FAIRness level

Figure 1: Map of Europe showing geographical coverage of data collections in the EU HIP metadata catalogue

Health data: where to find it?

HEALTHYCLOUD
Health Research & Innovation Cloud

- **Guidelines to standardise metadata templates and assessment of FAIRness maturity levels**
 - Recommendations for metadata template standardisation and guidelines for FAIRness maturity levels assessment
 - Descriptive metadata record template compatible with the DCAT-AP standard

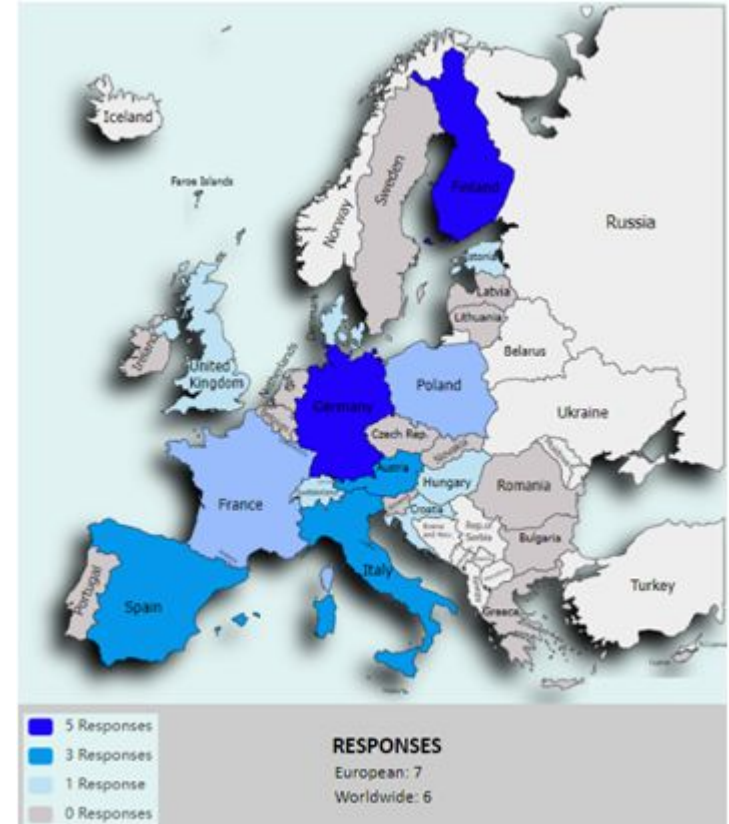

Health data: how to access it?

HEALTHYCLOUD
Health Research & Innovation Cloud

Dedicated data infrastructures: **health data hubs**

- Analysis of data hub patterns of **governance**
- Current **discoverability** solutions and **FAIR** adoption level

Health data: how to access it?

HEALTHYCLOUD
Health Research & Innovation Cloud

- **Usage and auditing data hubs indicators and incentive system:**
 - Measuring data usage and deposition in data infrastructures.
 - There are some incentives that could encourage data generators to share their data and data users to reuse data that is available in data hubs.
 - We have proposed that new HRIC shall recommend the use of common auditing systems and should advocate for active incentives.

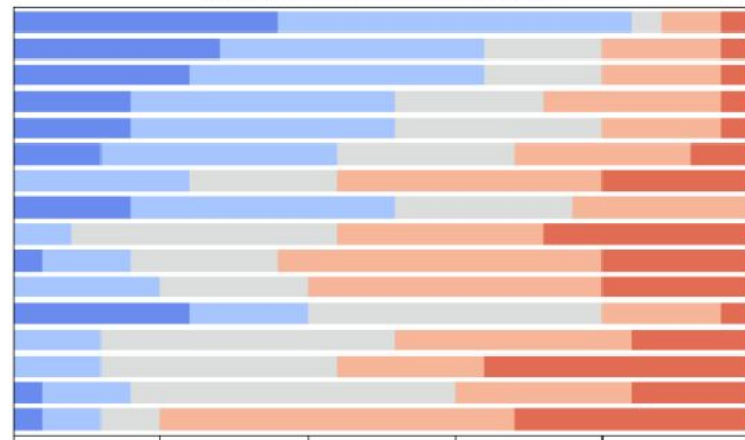

IMPACT

perspective: Researcher

- Dataset citation
- Dataset attribution
- Co-authorship
- Embargoes
- Dataset citation and usage statistics
- Collaborations
- Data sharing policy
- Data advertisement
- Institutional support
- Ethical and legal framework
- Career advancement
- Badges to acknowledge open data
- Public and patient benefit
- Intellectual property rights
- Electronic lab notebooks
- Harmonization of ethical requirements

EASE OF IMPLEMENTATION

perspective: Data Infrastructure

- Cite hosted datasets in papers
- Dissemination of submitted data
- Showcase data
- Easy request access procedures
- Data stewardship as a service
- Harvest metadata of datasets to other services
- Support in data quality and curation
- Highlight exemplar data returns
- Exclusivity of use
- Advertise what good has come out
- Return the results
- Quality improvement reports
- Convert data to a common schema
- Maintenance and legal ground
- Support in regulations, guidelines, standards and new policies
- Pseudonymization and de-identification services

participants: 25

Contribution to HRIC

HEALTHYCLOUD
Health Research & Innovation Cloud

- Health data availability, FAIRification and standardisation across Europe is essential for the future HRIC.
- Researchers need to know where to find diverse health-related data to be able to answer their research questions
 - Importance of **interoperable metadata catalogues**
- Gaps and needs remain in the practical application of the FAIR principles within health-related research and provided guidelines for FAIR metadata catalogues.
- The inclusion of data hubs with different data governance models across Europe is essential for the future HRIC.

Future directions

Role of Research Infrastructures (RIs) in the HRIC:

- Systematic involvement of research infrastructures to support researchers
- Need to achieve alignment on vision of HRIC and link between RIs/EOSC/EHDS
 - How to enable researchers to get the most out of the services and tools provided in the EHDS2 and EOSC
